

Artificial Intelligence and Machine Learning

An in depth look at the field

Aaron Lengyel

Abstract

These are a series of notes relating to machine learning and artificial intelligence. A lot of algorithms and approaches will be covered, as well as many different domains and techniques. This is not meant to be a complete guide but a helpful resource for those looking to learn more about implementing and using artificial intelligence to solve problems.

Contents

Artificial Intelligence

Heuristics	2
Finite State Machines	2
Mini-Max	2
$\alpha - \beta$ pruning	2
Monte Carlo Tree Search	2

Finite State Machines

Regular Expressions (RegEx)	2
---------------------------------------	---

Natural Language Processing

Machine Learning

Approaches	3
Supervised Learning	3
Unsupervised Learning	3
Reinforcement Learning	3

Machine Learning Models

Regression Analysis	4
Linear Regression	4
K-Nearest Neighbors (KNN)	4
Polynomial Regression	4
Support Vector Machines (SVM)	4
The “Kernel Trick”	4
Linear SVM	4
Non-Linear SVM	4
Bayesian Networks	4
Bayesian Linear Regression	4
Markov Chain Monte Carlo	4

Neural Networks

Network Structure	4
Forward Pass	4
The Activation Function	4
Backpropagation	4
Cost Function	4

Neural Network Architectures

Activation Functions	5
--------------------------------	---

Linear	5
ReLU	5
Sigmoid	5
Feed Forward	5
Convolutional Neural Network (CNN)	5
Long Short Term Memory (LSTM)	5
Recurrent Neural Network (RNN)	5
Generational Adversarial Networks (GAN)	5

Genetic Algorithm

Representing Genes	5
Fitness Function	5
Mutations and Crossovers	5
NEAT Algorithm	5
Memetic Algorithm	5

Metaheuristics

Local Search	6
Global Search	6
Single Solution	6
Population Based	6
Simulated Annealing	6
Swarm Intelligence	6
BOIDs	6
Ant Colony Optimization Algorithm	6
Bee Algorithm	6

Artificial Intelligence

Artificial Intelligence is generally used to refer to a variety of techniques, approaches, and algorithms used to make machines solve problems. The problems AI is applied in usually involve complex and dynamic systems, as well as making decisions, but traditionally they were devised for more philosophical and logical tasks.

Heuristics

A heuristic is a method that is not always optimal or perfect, but is practical and gives a sufficient solution. A heuristic could be something as simple as wearing only white shirts on weekends because that is when you wash the rest of your laundry.

Heuristics

Finite State Machines

Mini-Max

$\alpha - \beta$ pruning

Monte Carlo Tree Search

Finite State Machines

Regular Expressions (Regex)

Natural Language Processing

Machine Learning

Approaches

Supervised Learning

Unsupervised Learning

Reinforcement Learning

Machine Learning Models

Regression Analysis

Linear Regression

K-Nearest Neighbors (KNN)

Polynomial Regression

Support Vector Machines (SVM)

The “Kernel Trick”

Linear SVM

Non-Linear SVM

Bayesian Networks

Bayesian Linear Regression

Markov Chain Monte Carlo

Neural Networks

Network Structure

Forward Pass

The Activation Function

Backpropagation

Cost Function

Neural Network Architectures

Activation Functions

Linear

ReLU

Sigmoid

Feed Forward

Convolutional Neural Network (CNN)

Long Short Term Memory (LSTM)

Recurrent Neural Network (RNN)

Generational Adversarial Networks (GAN)

Genetic Algorithm

Representing Genes

Fitness Function

Mutations and Crossovers

NEAT Algorithm

Memetic Algorithm

Metaheuristics

Local Search

Global Search

Single Solution

Population Based

Simulated Annealing

Swarm Intelligence

BOIDs

Ant Colony Optimization Algorithm

Bee Algorithm
